All yurt tops come standard with heat welded Duro-Last roofing membrane 40/50 mil polyvinyl in white, tan, light gray, dark gray, or terra cotta. All handsewn yurt sidewalls come standard with the Duro-Last, but can be ordered in a Sea-Tarp 18 oz. weight cover material for an additional charge. The Sea-Tarp comes in 19 colors.

Our 3-season insulation is made of one layer of Reflectix double foil backed bubble insulation, lined with a mildew and fire resistant polyester fabric, which also creates a vapor barrier. Our 4-season insulation adds an additional 1 in. layer of polyester batting. All packages include both sidewall and roof insulation.

All yurts come with our distinctive octagonal skylight, fit to the dimensions of the compression ring. Skylights include a vent panel and a rugged central safety bracket designed to fit standard size stovepipes.

All yurts come standard with beautiful handcrafted door frames of Douglas fir and cedar, and all polyvinyl windows come standard with bug screens and storm flaps. Custom options, including a taller wall, additional windows, frames for french doors, or hard window frame upgrades are available for an additional charge. We find it is more economical for you to source your own doors locally, but can ship doors if necessary for an additional charge.

Nomad Shelter yurts are built Alaskan tough, and engineered to withstand snow loads and high winds. Custom engineering is available to meet your code requirements. All wood components are handcrafted, and all covers and insulation layers are handsewn and heat welded by our dedicated crew at Nomad Shelter. Every component of our yurt comes with a 15 year guarantee.

All hardware and tension cables are included, as well as basic floor plans, setup instructions, and full phone support.

The yurt floor, foundation, wood stove, and stove pipe are not included in your purchase. We are happy to provide information and referrals for those services.

Every yurt is made to order by Nomad Shelter in Homer, Alaska.
